# CARBO N

CARBO N has been designed to improve nitrogen efficiencies on low fertility soils. This is a granulated fertiliser blending sulphate of ammonia with natural carbons and potassium silicate mica, specially formulated for most soils and used to give maximum benefit to crops during the season.

## BENEFITS

- Increases aerobic microbe activity
- Contains an auxin like growth promotant that can enhance cell division and elongation
- Carbon to stabilise and chelate nitrogen and to improve nitrogen efficiency
- Increases CEC of the soil
- Suppresses pathogenic micro organisms
- Buffers the effects of excessive elements (particularly salts/sodium) toxic chemicals and heavy metals
- pH buffering capacity to help neutralise the problems associated with pH extremes
- Contains silicates for more efficient photosynthesis, cell wall strengthening and as a management tool for excess sodium

## TYPICAL ANALYSIS

N	P	K	S	Carbon	Ca	Mg	Fe	Si
18.5%	0%	0.06%	21.1%	2%	0.42%	0.18%	0.25%	0.2%

+ Trace Minerals Boron, Manganese, Copper, Zinc, Cobalt, Molybdenum & Selenium

## APPLICATION RATES

*Application Rates should be determined by soil analysis and applied in conjunction with a balanced nutritional program...*
