

Combining Conventional with Organic Ingredients

# **BIO ACTIVE K FERTILISER**

#### A Concentrated, Stabilised Liquid K Fertiliser

- Includes yeast, complex sugars and crude protein to feed soil biology
- ☑ Contains liquid carbon (5% C) to increase CEC and soil potassium storage
- Base levels of sulfur, calcium and magnesium & a range of essential trace elements
- Bio-Active component is a by-product of the molasses fermentation, becoming a great food source for microbes
- Liquid potassium formulation allows for quicker potassium uptake by plants, as it is immediately available in the soil solution
- Enhanced application flexibility, allowing for precise nutrient delivery through irrigation systems for consistent crop growth

## TYPICAL ANALYSIS+

К	S	Ca	Mg	Carbon
25%	0.32%	0.25%	0.19%	5%

<sup>+</sup> Includes trace elements of boron, manganese, copper, zinc, cobalt, molybdenum & selenium Typical analysis may vary due to natural ingredient included in this product.

Bio-Active K is a liquid potassium fertilizer that enhances soil stability and improves the efficiency of potassium uptake. This product ensures that potassium is readily available for critical plant functions such as water regulation, enzyme activation, and carbohydrate synthesis and storage, making it an effective solution for boosting plant health and productivity.

## **APPLICATION RATES**

Application rates of Bio-Active K will be dependent on the specific crop, and the timing of application. Bio-Active K is applied through drip & sprinkler systems. Please speak with Ag Plus Consultancy to determine the best soil application rate for your specific crop.
