# STARTER MIX

Starter Mix has been specifically designed as a basal fertiliser to give; Improved root structure. More even fruit size and better colour. Increased yield and quality. Better taste and shelf-life.

## BENEFITS

- Contain a carbon mineral ingredient which will increase the nutrient release of the other chemical fertilisers. It will prevent phosphorous from the lock-ups and increase and maintain phosphorus activity for longer
- Contains carbon to stabilise nitrogen and to improve nitrogen efficiency
- Increases aerobic microbic activity
- Suppresses pathogenic micro organisms
- Buffers the effects of excessive elements (particularly salts/sodium) toxic chemicals and heavy metals
- pH buffering capacity to help neutralise the problems associated with pH extremes
- High carbon to increase the CEC of the soil which aids in moisture and nutrient retention
- Contains silicates for more efficient photosynthesis, cell wall strengthening as a management tool for excess sodium
- Contains minerals to improve soil structure, reduce surface crusting, and to aid in water penetration/absorption and aeration

## TYPICAL ANALYSIS

N	P	K	S	Si	Ca	Carbon
10.1%	8%	11.1%	7.5%	0.36%	2.8%	4.7%

+ Trace Elements Boron, Manganese, Copper, Zinc, Cobalt, Molybdenum & Selenium

## TIMING

At sowing stage

## APPLICATION RATES

For Horticulture apply 500 - 750kg per hectare in the row depending on crop and soil test results.

For Sugar Cane 200 - 250kg per hectare in the row depending upon previous crops and soil test results.

*STARTER MIX combined with other products can greatly improve yields in low nutrient soils, use PHOS-PLUS as a seed/set transplant treatment to give maximum phosphorus release at germination.*
